

Our Big RSPB Bird Watch 2018

Today we were scientists observing and identifying the birds in our outdoor area. We counted the birds we saw and made a record on our chart. We put all the information we found into the RSPB website.

This year we saw 24 birds. 5 different kinds of bird. Mostly we saw pigeons and crows.

We hope that when the building work has finished next to school we will see more birds return and use the hedges and trees for their nests. At the moment, we think it is too noisy for them.

In Early Years we made some bird feeders to attract more birds to our school site

Ivor brought in a special book from home that helped us identify the birds.

Can you spot the pigeons?

William suggested we all use
the bushes as camouflage
and creep so we will see
more birds

We are
trying to
attract the
birds with
some seed

Lillie holds out
her hand with
seeds in and
hopes the birds
will come and get
some.

It's so noisy the
birds won't come
says Mackinley

so I can
watch the
and the
see

fastened her
bird feeder to
the willow tree.
She tied 5 in a
row so the wind
would not blow
the food away

We had to keep trying and trying to fasten our bird feeders to the trees but we didn't give up because we know the birds will need this food in winter

Sam was such a confident, thoughtful and considerate friend during our activities. While we were getting ready to go out he helped 3 people faster their coats

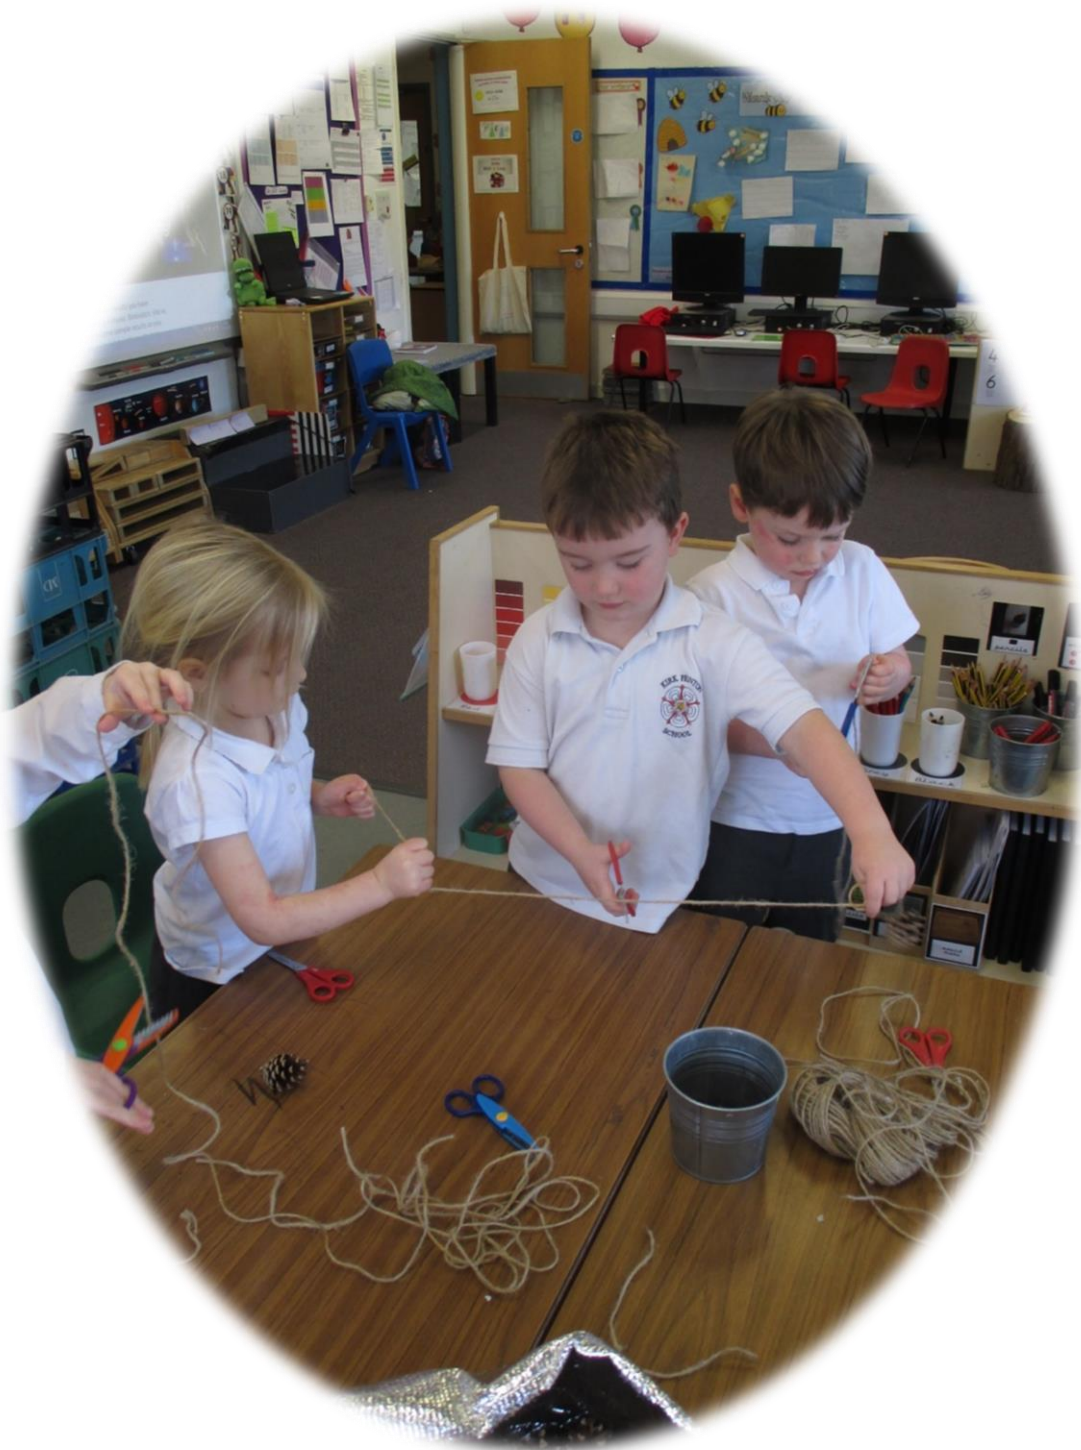

We washed off all the lard and seeds after making our bird feeders and used scrubbing brushes and lots of soap!

We helped each other to cut string by holding the string tight at each end

We each thought about where would like to hang our feeders so we could watch the birds.

Tying an overhand knot took great determination

Helping each other to cut the string!
